# 1 Introduction

## 1.1 Goal

## 1.2 Theory

## 2 Methods

### 2.1 The software model

### 2.2 Model configuration

#### Statistical Analysis Equations

The following equations were used to express the mass (M in mg) and temperature (T in Kelvin) dependence of individual RMR and IR:

$$I = \alpha M^b e^{Ea \left( \frac{T-T_0}{k_B T_0 T} \right)} \quad (1a)$$

$$I = \alpha M^b e^{p \left( \frac{T-T_0}{k_B T_0 T} \right) - q \left( \frac{T-T_0}{k_B T_0 T} \right)^2} \quad (1b)$$

Table 1: Definitions/explanations MTE equations

Parameter	Explanation
$\alpha$	metabolic or ingestion expression level at reference temperature ( $T_0$ )
$b$	the mass-scaling exponent
$M$	dry body mass (mg)
$Ea$	activation energy (eV)
$k_B$	Boltzmann's constant ( $8.62 * 10^{-5}$ eV $K^{-1}$ )

The standard MTE formulation (1a) is simply a particular case of the quadratic formulation (1b) where  $q = 0$  and the equation is reduced to the MTE model where  $p$  can thus be interpreted as the activation energy.

Energetic efficiency was also calculated as follows:  $E = (IR/RMR) * A_T$ , where the ratio of IR to RMR is the ingestion to metabolism efficiency and  $A_T$  is the assimilation efficiency at temperature  $T$ . The temperature ( $T$  in Kelvin) dependence of assimilation efficiency was expressed, using empirical equations and values for detritivores Assimilation efficiency was following a logistic equation with the MTE equation both at the numerator and the denominator With the following formulation, assimilation efficiency is confined between 0 and 1 (no or complete assimilation):

$$A_T = \frac{\alpha e^{Ea \left( \frac{T-T_0}{k_B T_0 T} \right)}}{1 + \alpha e^{Ea \left( \frac{T-T_0}{k_B T_0 T} \right)}} \quad (2)$$

#### Consumer-Resource Dynamics Model

Below are the ordinary differential equations describing temporal change in leaf litter standing stocks ( $L$ ) and Gammarus population biomass ( $G$ ) (Equation 3a and 3b).

$$\frac{dL}{dt} = I - f(L)_T G - k_T L \quad (3a)$$

$$\frac{dG}{dt} = G [f(L)_T A - RMR_T] \quad (3b)$$

### 3 Results

## 4 Discussion and Conclusion

### 4.1 Discussion

### 4.2 General conclusion and perspective
